

HOME AND PERSONAL CARE (HPC)

AECI Industrial Chemicals manufactures a wide range of surfactants used as primary ingredients for home and personal care (HPC) products

FEATURED PRODUCT CATEGORIES

01 Linear Alkyl Benzene Acids and Salt Derivatives

A range of surfactants based on Linear Alkyl Benzene (LAB) and neutralised derivatives. Used as liquid detergents, washing powders and industrial detergents.

02 Fatty Alkyl Sulphates

A range of primary surfactants produced by the sulphation of fatty alcohol. They have a high flash foam and are thus used as primary surfactants in home care and personal care products and industrial cleaners.

03 Amine Oxide

Non-ionic surfactant used as a foam booster and viscosity modifier in various detergent products including thickened bleaches.

04 Sodium Lauryl Ether Sulphate

A range of 25-70% active SLES surfactants that serve as primary or secondary surfactants in foam bath, shower products, shampoos, hand soaps and dishwashing liquids.

05 Cationic and Anionic Surfactants

Surfactants with biocidal properties, commonly used in various types of disinfectant surface cleaners.

06 Amphoteric Surfactants

A range of mild surfactants used primarily as foam boosters and viscosity modifiers. Commonly used in bath, shower and personal hygiene products.

07 Hydrotropes

A range of surfactants used as viscosity modifiers and for cloud point suppression.

MANUFACTURING CAPABILITY

HPC products are manufactured at a dedicated plant in Chloorkop, Gauteng.

The plant is designed to produce surfactants through sulphonation of selected organic raw material.

Facilities are ISO 9001, ISO 14001 and ISO 45001 certified.

The plant incorporates two free flow film reactors for the sulphonation process.

Our home and personal care product range is supplemented by an extensive portfolio of traded chemicals, sourced from our leading global trade partners

POST-PURCHASE TECHNICAL SUPPORT

Maximise the value of your chemical purchases with a host of post-purchase technical support services.

We offer technical support and management services for existing clients. This ensures that your chemical storage and offloading facilities comply with best engineering and safety standards.

Services include troubleshooting, assistance with chemical formulation and product application support.
